The Natural Writing Guide for 2026

Writing that sounds human is easy to read and easy to trust. This guide covers the habits that make text sound robotic, five ways to fix them, a voice chart, a read-aloud checklist and a page to plan your own voice.

Habits that make text sound robotic

1. **Stock openers.** "In today's fast-paced world" says nothing.
2. **Filler transitions.** "Moreover", "Furthermore" and "In conclusion" at the start of every paragraph.
3. **One sentence shape.** Every sentence the same length and built the same way.
4. **Buzzwords.** "Leverage", "delve", "unparalleled" and "synergy".
5. **No contractions.** "It is" and "do not" where a person would say "it's" and "don't".

Five ways to fix them

1. **Vary your sentences.** Mix short and long, and change how they start.
2. **Use contractions.** Where you would say them out loud.
3. **Swap buzzwords for plain words.** "Use" for "leverage", "look at" for "delve into".
4. **Add one real detail.** A number, a name or an example only you know.
5. **Cut the filler.** Delete any sentence that repeats the one before it.

Voice chart

Voice	How it sounds	Best for
Conversational	Contractions, plain words, one reader	Blogs and newsletters
Friendly	Warm and encouraging	Emails to customers
Professional but Warm	Polished, never stiff	Work email and business pages
Casual	Everyday phrases	Social posts
Storytelling	A little narrative flow	About pages and product stories

Read-aloud checklist

1. **Read it out loud.** Mark every line where you stumble.
2. **Check the facts.** Names, numbers and dates must match your source.
3. **Keep your own voice.** Change any word you would never say.
4. **Follow the rules.** At school or work, follow the AI policy and say where AI helped when it asks.

Plan your own voice

Fill this in, then humanize your text on the AI Humanizer.

Who reads it, and where

The voice and personality you want

One detail or example only you can add
